

MARAKULIN DMITRY

FULL-STACK DEVELOPER

ABOUT ME

Developer with experience in enterprise environment: improving and automating systems on C#, PHP and Python.

Working with real production systems - Directum, Bitrix24, Active Directory.

KEY ACHIEVEMENTS

- Developed C# synchronization module - automated user provisioning in the system via LDAP without administrator involvement
- Implemented PHP-based procurement analytical reports in Bitrix24 with export to XLSX
- Built Python app for 1C & AD sync - automated account creation and updates via LDAP based on 1C exports

KEY SKILLS

- Development in C#, PHP, Python, Node.js
- Backend logic & automation
- Active Directory (LDAP)
- SQL, PostgreSQL
- Directum Development Studio
- REST API, Git, JavaScript

WORK EXPERIENCE

Software Engineer

JSC Research Institute "Polyus" named after M.F. Stelmakh / August 2024 – Present

Part of Shvabe Holding, State Corporation Rostec. Responsible for development, maintenance, and automation of corporate systems Directum and Bitrix24, as well as enterprise systems integration.

- Developed C# auto-sync module for Directum & AD: fetches LDAP data daily, parses attributes, and provisions users in Directum; built manual sync trigger.
- Implemented PHP procurement analytics in Bitrix24: filters by department, employee, purchase type, and stage with duration tracking; exports to XLSX.
- Created Python sync script for 1C & AD: LDAP connection, 1C XLS export parsing, attribute mapping, auto-updating, and user creation.
- Designed custom document cards in Directum Development Studio for RKM and unified manufacturing requests with inheritance from baseline tasks.
- Delivered no-code Bitrix24 form enhancements: custom fields rendered dynamically and integrated into approval business workflows.
- Built automated sync scheduler using Windows Task Scheduler (currently undergoing internal testing prior to deployment).
- Co-developed TeamSpace web platform (Node.js + Express): task management system supporting multiple assignees, built-in Markdown wiki with version control, session auth, and action logging (built as internal tool replacing third-party ITSM).
