

DIMITRY MARAKULIN

SYSTEM ANALYST

ABOUT ME

Specializing in requirements gathering and formalization, system analysis, and business process modeling.

Over 2 years of deep immersion into complex enterprise environments, delivering clear specifications and functional designs.

KEY ACHIEVEMENTS

- Designed and documented the end-to-end digital document workflow in Directum.
- Optimized procurement approval routes in collaboration with Procurement and Security departments.
- Authored over 5 comprehensive business process regulations for enterprise-wide adoption.

CORE SKILLS

- Requirements gathering & analytical modeling
- Technical specifications & functional design
- Tech Stack: SQL, JSON, Python, REST API
- Notation: BPMN, UML, Data Visualization
- Stakeholder management & alignment
- Strong communication & facilitation skills

WORK EXPERIENCE

Software Engineer / System Analyst

JSC RI "POLYUS" named after M.F. Stelmakh / August 2024 – Present

Part of "Shvabe" Holding, Rostec State Corporation. A leading domestic developer of laser and quantum-electronic technologies. Responsible for integrating document management systems, and supporting Directum and Bitrix24 enterprise installations.

- Facilitated 50+ stakeholder workshops and developer syncs; captured 90+ comprehensive requirements to map entire corporate workflows.
- Architected the complete electronic document lifecycle in Directum, modeling 6 custom document types and streamlining employee onboarding.
- Overhauled procurement approval paths in Bitrix24, deploying a dynamic 10-stage logic currently used by over 500 active employees.
- Authored the unified cost calculation and material tracking policy from scratch, establishing standards for ~50 cross-functional team members.
- Successfully phased out paper memos, orders, and powers of attorney, moving the office administration fully to digital Directum channels.
- Consolidated business requirements across 7 corporate departments and 2 deputy directors to build a unified manufacturing order pipeline in 1C:ERP.
- Managed functional and integration testing for Directum modules, diagnosing bugs and directly coordinating vendor engineering teams.
- Authored technical specifications alongside agile artifacts, including detailed User Stories and visual Use Case scenarios.
- Modeled static and dynamic business process diagrams to present technical architectures to leadership and software developers.
