ABOUT ME

Full-stack developer with hands-on experience in enterprise system integration and automation. Specialized in Directum and Active Directory synchronization, analytics implementation in Bitrix24, and data pipeline development across 1C and corporate systems. Proficient in C#, PHP, Python, and Node.js; focused on delivering scalable solutions that reduce manual overhead and improve operational efficiency.

KEY ACHIEVEMENTS

- Automated daily synchronization of 30+ accounts (creation, update, deletion), eliminating 45 minutes of manual work per day
- Delivered procurement analytics covering 500+ employees with XLSX export; report generation reduced from manual compilation to seconds
- Automated 1C and Active Directory synchronization via LDAP; script processes 1000+ account updates daily without manual intervention.

KEY SKILLS

- Development in C#, PHP, Python, Node.js
- Backend logic & automation
- Active Directory (LDAP)
- SQL, PostgreSQL
- Directum Development Studio
- REST API, Git, JavaScript

WORK EXPERIENCE

Software Engineer

JSC Research Institute "Polyus" named after M.F. Stelmakh / August 2024 – Present

Part of the "Shvabe" holding of the Rostec State Corporation. Developed, enhanced, and automated Directum and Bitrix24 corporate systems; designed and implemented enterprise system integrations across Directum, Active Directory, 1C, and internal platforms.

- Built automatic synchronization module for Directum and Active Directory in C#: daily LDAP data retrieval, attribute parsing, and employee account creation; added manual sync triggering via internal system task.
- Engineered analytical procurement report generation in PHP for Bitrix24: multi-dimensional filtering by department, employee, procurement type, and approval stage with stage-level time tracking; XLSX export for downstream analysis.
- Developed Python data synchronization pipeline between 1C and Active Directory: LDAP connection, XLS export parsing, attribute mapping, and automated account creation and updates.
- Designed custom document cards in Directum Development Studio for RKM and unified production requests using standard system task inheritance.
- Implemented no-code form enhancements in Bitrix24: custom fields with conditional output and value reading integrated into approval business processes.
- Built automatic synchronization scheduler using Windows Task Scheduler; code completed and under internal review for production deployment.
- Co-developed TeamSpace, an internal web platform using Node.js and Express: task management with multi-assignee support, knowledge base with Markdown and article versioning, session-based authorization, and action logging; replaced third-party ITSM solutions for the department.
